

# FLAPPY FISH DOCUMENTATION

## Flappy Fish

Flappy Fish is a fun and simple browser-based game inspired by the classic Flappy Bird. Guide your fish through obstacles, beat your high score, and enjoy music and sound effects—all offline thanks to PWA technology!

### Features OF The Game

| Feature                       | Description                                                                |
|-------------------------------|----------------------------------------------------------------------------|
| Jump Controls                 | Press <b>Spacebar</b> or <b>Left Click</b> to make the fish jump.          |
| Obstacles                     | Swim through underwater obstacles without colliding.                       |
| Preloader                     | Displays helpful info while assets load.                                   |
| High Score Storage            | Saves your best score locally in your browser.                             |
| Background Music & SFX        | Includes music and sounds for tapping, scoring, collisions, and game over. |
| Score Counter                 | Displays and updates your score in real-time.                              |
| Internet Connection Detection | Alerts or adapts if no internet connection is available.                   |
| Retry Button                  | Lets you restart the game after failing.                                   |
| PWA Install Button            | Allows users to install the game as an app on their device.                |

---
